

EDUCATION

- University of Gdańsk | Computer Science 3rh Year Student
- Zespół Szkół Technicznych in Grudziądz | IT Technician Title

CERTIFICATES

INF.03 – 03.2024
INF.02 – 08.2022
CCNAv7 – 03.2022
IT Essentials – 06.2020

SKILLS

Technology / Data: Java, C/C++, Python, Flask, Django, OOP, JUnit5, SQL, PostgreSQL, MySQL, SQLite, .NET
Infrastructure : Git, Windows Server, Linux, Bash, CCNA, HTTP/HTTPS, Jenkins, Jira, AI(Cursor, Gemini, ChatGPT, Copilot, Claude), QA, CI/CD
Languages: polish(native), english(B2), german(A1)

MATEUSZ SOBCZAK

PROFILE

Computer Science student specializing in web applications and databases, and a Technical School of Information Technology graduate. I have practical experience in executing IT projects involving programming, database management, and modular application architecture. I focus on writing clean code while ensuring system stability and data security. Currently seeking opportunities for professional growth and development.

PORTFOLIO

SII | since 05.2026
Firmware Validation Engineer

- **Test Infrastructure:** Maintaining the infrastructure used for firmware validation.
- **Networking:** Configuring and troubleshooting networks in test setups.
- **Hardware Testing:** Running firmware tests on target platforms and devices.
- **Debugging:** Diagnosing hardware and firmware issues, analyzing logs.

JAVA | Stock market simulator

- Developed an advanced domain model based on abstraction and polymorphism.
- Implemented a polymorphic investment portfolio managed without the use of instanceof, ensuring clean and maintainable code.
- Developed market cost logic and transaction validation systems.
- Conducted comprehensive unit testing using the JUnit 5 framework to ensure software reliability.

PYTHON | Game 2048

- Designed and implemented complete game logic with move validation in a modular architecture.
- Developed a game state management system, including save files and checkpoints.
- Integrated the application with a database and implemented full CRUD operations.
- Achieved high reliability by covering key system mechanisms with unit tests.

SQL | Construction Company Management System

- Database Design: Developed a normalized database structure (12 tables) including a detailed Entity-Relationship Diagram (ERD).
- Business Logic Implementation: Developed complex business logic using stored functions, triggers, and database views.
- Concurrency Management: Handled database concurrency using transactions and locking mechanisms to ensure data integrity.
- Automation: Automated cost reporting and scheduling tasks within the PostgreSQL environment.
